Thesis — Momentum & Growth Check

- Gaadi-ka-Speed (sales growth pace): ACCELERATING (speeding up) — Growing +54%/yr
- Growth velocity strong ($\geq 15\%$ YoY) — passes the momentum bar.
- Framework: Momentum & Growth (Gaadi-ka-Speed). We rank by REVENUE growth pace, not net income.
- Gaadi-ka-Speed: revenue +54% YoY (Q1 FY27), ACCELERATING — passes the momentum bar strongly.
- BUT headline growth is inflated by copper-price pass-through. Volume +17% is the real demand signal — still strong, but below the +54% headline.
- Acceleration quality: margin expanded (EBITDA 7%→9%) on scale + mix — genuine operating leverage, not just price.
- Corroborating signals: 1.5 lakh+ retail touch points, cable capacity (util ~90%), exports diversification, FMEG breakeven.
- Circle of competence: wires & cables + FMEG is a simple, explainable branded business — passes the 'can I explain it' test.

Brutal Honesty & Risks

- Revenue growth is partly COPPER/LME PRICE INFLATION. Q1 FY27 pricing growth ~40% (metal +~40%, ~25% product pricing) — a large chunk of the +54% is price, not volume. Volume grew a solid but lower +17%.
- Volume growth +17% is strong, but management guides ~18% — so the +54% headline overstates real demand momentum.
- EBITDA margin 9% still trails Polycab (~11-12%). W&C at 9.9%, FMEG just at breakeven.
- FMEG breakeven is fresh and on a quarterly basis — sustainability on a yearly basis is still to be proven.
- ₹1,200 cr capex (~80% cable) is a big bet; cable utilization ~90% supports it, but execution risk remains.
- Valuation: premium P/E 47.2 — you're paying up for the growth story; multiple compresses hard if growth disappoints.
- Middle East geopolitical exposure remains a swing factor for exports.
- Data center contribution is still negligible — don't price in the AI/data-center story yet.
- RSI 83 — overbought; short-term pullback risk is real.
- P/E 51.0 — expensive vs sector; you're paying a premium for the growth story.
